## Claim Rejections - 35 USC § 112

1. Claims 9-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9 recites the limitation "the pair of heating resistors" in line 12. There is insufficient antecedent basis for this limitation in the claim.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Drexel et al. (5,285,673) (hereinafter Drexel).

Drexel teaches a flow rate sensor comprising a sensor tube (17), a plurality of inner tubes (not numbered) provided within the sensor tube, heating resistors (24, 26) (self heated) operatively connected to the sensor tube, a temperature sensor (24, 26) operable to control the temperature of the heating resistors and a voltage applying device (Col. 1, line 40).

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 10-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Drexel in view of Ritchart (5,792,952).

Application/Control Number: 10/718,511

Art Unit: 2855

Page 3

Drexel shows all the features of the instant invention except the U-shaped structure or the

material the tubes are made from and the inside outside diameters of the tubes. Ritchart teaches

the use of a capillary to be as a sensor tube made of stainless tube of a specific inside and outside

diameter. It would have been obvious to a person having ordinary skill in the art at the time the

invention was made to provide a capillary tube of such a precise dimension since providing a

small inner diameter of a tube provided a better laminar flow within the tube that would enhance

a proper flow rate measurement. Furthermore, Ritchart teaches the use of a conventional wire

wound heating and sensing element as well as the inventive thin film element wound around the

sensor tube. The thickness and the resistance of the heating resistor would be within the scope of

an individual based on the type of tube is used. As to how many inner tubes are provided within

the sensor tube would be within the scope of a skilled individual since such arrangement would

provide a better and smoother laminar flow.

Allowable Subject Matter

6. Claims 1-8 are allowed.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Harshad Patel whose telephone number is (571) 272-2187. The

examiner can normally be reached on Monday-Thursday (7:00 AM-5:30 PM).
